50X1-HUM

The Oil Research Institute is studying the possibilities of improving the quality of lubrication oils of Polish production, as well as the production of inhibitors, substances added to oils to augment their lubricating qualities. Up to now the latter have been imported from the USSR but in insufficient quantities. It has been ascertained that certain lubricating oils without those additional substances, damage machinery. As an example, LUX-10 oil is cited; this, used for tractors, causes corrosion of the engines.
